IMPORTER OF RECORD HANDLED, NOT OUTSOURCED

Stellar acts as your Importer of Record, handling the complexities others pass off. We handle tariffs, customs clearance, and regulatory compliance with 20 years of expertise—minimizing risk, avoiding delays, and ensuring a smooth, reliable delivery process.

BUILT STRONGER TO LAST LONGER!

15 reasons why you'll want to buy award-winning Stellar™ Storage Containers

1 | The originator of Z-Box™ Folding Design which allows for 30-minute assembly

Stellar (then Universal) pioneered Z-Box Technology, the revolutionary folding storage container design that allows for unmatched 30-minute assembly as well as the ability to ship up to 12 folded units on a truck. This design means dramatic cost savings in both assembly time as well as shipping and is responsible for launching the portable storage container category.

3 | Built for easy portability

Durable all-steel construction and the sturdy, rigid “No-Bow” base allows for safe and easy container relocation with a forklift or transport by flatbed, even when containers are fully loaded.

4 | “No-Bow” Base enhances structural integrity

Every Stellar Container features a sturdy “No-Bow” Base which enhances the structural integrity of the container by dramatically reducing bowing that can misshape the structure and lead to failed seams and openings under doors.

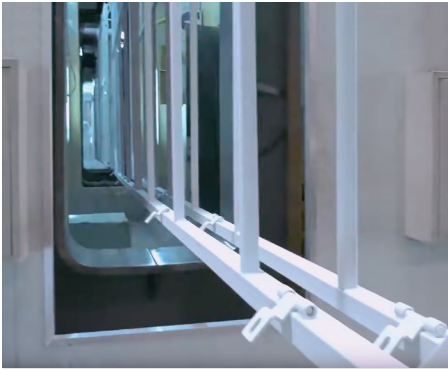

2 | Only Stellar™ can boast a dedicated team of engineers

Our focus for the last two decades has been on building a better storage container to solve your businesses unique challenges. By continually leveraging new technologies, new materials and new manufacturing techniques, this engineering “Dream Team” is a major reason that Stellar has won 15 consecutive ISS “Best Self Storage Container Awards”.

5 | “Seal-The-Deal” Swing Doors offer superior waterproof performance

All Stellar™ Storage Containers come standard with single or double swing doors which are stronger, more secure, easier to access and offer a better weatherproof seal than roll-up doors. Our customized door gaskets as well as our “No-Bow” container base eliminates shifting that can cause unwanted gaps. Swing doors also allow for more elaborate branding and feature an emergency release cable to prevent getting trapped inside.

6 | "IQ" post-weld powder coating

All Stellar Containers feature fully powder coated frames, roofs, door wall/door assemblies using our unique post-weld powder coating process that ensures the long-lasting integrity of the containers.

7 | "Impervia" fully gasketed seams and doors for waterproof performance

Every seam on a Stellar Container is gasketed to ensure long term watertight performance. This includes the custom-designed swing door gaskets that conform to both door and door frame for added strength and to minimize wear.

8 | Single seam roofs are smooth and sloped so water runs off

The single-seam roof on a Stellar Storage Container is smooth and sloped from a slight peak down the center at a 30mm pitch so water easily flows off to either side directing water away from the doors. This design also allows for a flat roof along the perimeter so the containers can stack. Our roofs also feature a shoebox-style 1" overhang, self-indexing fitment and machine butt-welded construction (which is strong, leakproof, attractive, and easy to inspect). All to ensure your Stellar Storage Container stays dry inside.

9 | "Griptonite" anti-slip floor coating (plus underside moisture barrier)

The 3/4" plywood flooring in every Stellar container is coated with "Griptonite", our special resin-based treatment that is textured to make the floor anti-slip and easy to clean. The underside of the flooring features a moisture barrier coating.

10 | Stack up to three containers high

Thanks to the inherent structural integrity of a Stellar Storage Container, you can stack them three high to save storage space.

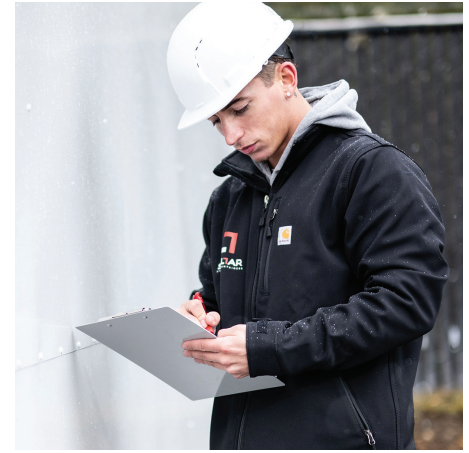

11 | Premium stainless steel hardware

A common place to cut corners is hardware. At Stellar, we use only premium stainless steel hardware for the manufacturing and assembly of our storage containers.

12 | "Your Way" custom sizing, custom features and custom branding/colors

Stellar can make containers to your size specifications and with the features you want. We can also make custom-colored containers and/or apply distinctive branding to the exterior walls using a state-of-the-art silk screen printing machine designed specifically for this purpose. You get attention grabbing high-gloss branding that is industry-warranted against fading for a minimum of 5 years.

13 | The Stellar™ "Better Built Difference" 60-Point Quality Control Checklist

A key part of our commitment to quality is our exhaustive "Better Built Difference" 60-Point Quality Control Checklist which each and every Stellar Container must pass. This includes the assembling and photographing of every unit. It's one more way we ensure the container you buy from Stellar performs as promised today, tomorrow and for years in the future.

14 | Custom-built shipping frames

Stellar builds custom metal shipping frames for every order to protect your containers during shipping and deployment.

15 | On-site Stellar™ training expert oversees unloading, unpacking and assembly

For the first delivery to each new customer location, we send a Stellar training expert to lead the unloading and unpacking process and to help assemble the first few units so that you are comfortable with the process.

PORTABLE STORAGE CONTAINERS

Portable containers are durable, portable storage units engineered to withstand transportation demands and year-round outdoor use. Protected by IQ Post-Weld Powder Coating, every unit is built to resist corrosion, UV exposure, and the harshest conditions.

-  Easily portable - even when loaded up to 10,000 lbs
-  Can stack up to three units high when assembled
-  Custom color and branding options for your business
-  Base is equipped with additional forklift pockets, D-Ring, and Cardinal Mule integration package

RELOCATABLE STORAGE CONTAINERS

Relocatable containers give self-storage operators a fast, flexible way to add revenue-generating units without permanent construction. Designed for year-round outdoor use, 30-minute assembly and foundation-free placement, containers can be deployed the same day, accelerating revenue.

-  Multiple sizes, door configurations, and internal partition options to match your needs
-  Foundation-free placement
-  Permit-ready engineering support
-  Premium protection with post-weld powder coating

SIZE AND DOOR CONFIGURATIONS

Our containers are available multiple sizes and models, offering single- and multi-door configurations with flexible internal layouts.

STANDARD FEATURES

- Flat Lightweight Steel Panels – Powder Coated White
- Heavy Duty Steel Roof and Wall Frame - Powder Coated White
- Heavy Duty Steel Base and Corner Guards - Powder Coated Black
- Double Swing Doors or Flat Swing Doors, Standard Door Lock Assembly w/ Interior Emergency Door Release
- T-Catch Door Retention System
- Rain Guard above door to deflect water
- 3/4" Wood Floor with waterproof, slip-resistant fiber on top and bottom
- Skid Resistant Rubber Pads under base - for stacking protection and drainage; reduces movement
- Forklift Sleeves on both sides
- Unloading kit provided on each order to each unique location; all hardware needed for assembly is packed in each folder container. Tools not included.
- Integrated airflow design reduces condensation. Set of 4 included standard.
- Compatible with cardinal mule, rollback truck, forklift, and hawk moving systems.
- Set of 12 & 16, Tie Down Rings 3' and 5' from the floor for 16'L & 20'L models

"YOUR WAY" CUSTOMIZATION OPTIONS

We offer storage containers in 8', 12', 16', 20' lengths, with custom sizes and configurations available. Custom options include door placement, door type, partitions, insulation, colors, branding, and modified height, length, or width. Containers can also be customized to integrate with virtually any delivery system.
